States of fever viz

- ~~apthous~~ —
- Ophthal —
- apthous.
- Scrophulous.
- Scorbatic
- Convulsive
- Hydrophobic
- Lyster & Hypocord.
- Cutaneous.

1
of the Otagic state of fever.

I call it a state of fever, for it always attends it in a greater or less degree. It is a common disease in children. Now then it accompanies influenza, & all the forms of sore throat. It is sometimes excited by a salivation.

Remedies

1 U.S. - 2 prunes - 3 Blisters behind the ears. 4 Lard annu. 5 The Smoke of Sugar burnt on foals & conveyed into the ear by a funnel. ^{also of Tobacco} 6 The Juice of the Sweet sap of the hickory is used by the Indians for this purpose. If it tends to a Suppuration, Cataplasms of bread & milk & boiled Onions are proper to the external ear. U

V Dr Hamilton of Linn Regis describes
an apthous sore mouth in near the
leathore which he calls Cancer Apthations.
It is a form of ~~fungus~~ the fever which is
derived from marsh exhalation. Children
& women are most subject to it. In the
former it often destroys the fore teeth. The
Ulcers in the mouth are fetid, & discharge
a corrosive matter.

2
will generally prevent this termination,
as also the destruction of the membrana
Tympani, and deafness. -

The Apthous state of fever.

a sore throat and mouth is never a
primary disease when accompanied with
fever. It is the effect of an effort of
nature to relieve herself by depletion.
It sometimes attends Epidemicity. Dr
Groninger describes a fever of this kind in
Holland. In Children ^{often} it is the effect of
general fever induced by the stimulus of
the retained mucus, or perhaps by the
common atmosphere. Now when it occurs
as Consump? Dyspnoea & Diarrhoea,
in the close of chronic diseases in which
it is generally fatal. In Acute cases ^{pluribus}
it is favourable. I have seen one & read of

✓ The Catarrh of 1803 ended in a sore mouth
or low degree of Aphthae in many people.

Another in which it proved fatal. I
have once known it terminate in laryngeal stridor
in a child. ✓

Remedies

~~But~~ They sh^d be regulated by the pulse,
Season & reigning Epidemic. 1. If the
pulse be tense or full. 2. Purges. 3. Calo-
mel if nature be incompetent to cleanse
the mouth & throat. 4. Blisters. 5. Gargles
of detergent liquors - as Sage tea with
honey & vinegar - Alum - Myrrh &c. &
~~6 Bark~~ — Dr Hamilton commends
very highly a little ^{of the muriatic} ~~Hydrochloric~~ Acid in mel:
Rosar^{to be} applied to the face. 6 Bark.

It is one of the Endemics of
Barbadoes where it has been ably descri-
bed by Dr Huxley by the name of the Gland:

dular disease. ^{Dr Christman who questions it in}
^{his travels throught the West Indies in search of a proof of the}
^{it is a very common disease of the Glandular system of the}
It affects the Glands of the throat - the groin,
upper lip & nose -
the axilla - breasts - knees - testicles & ovaries

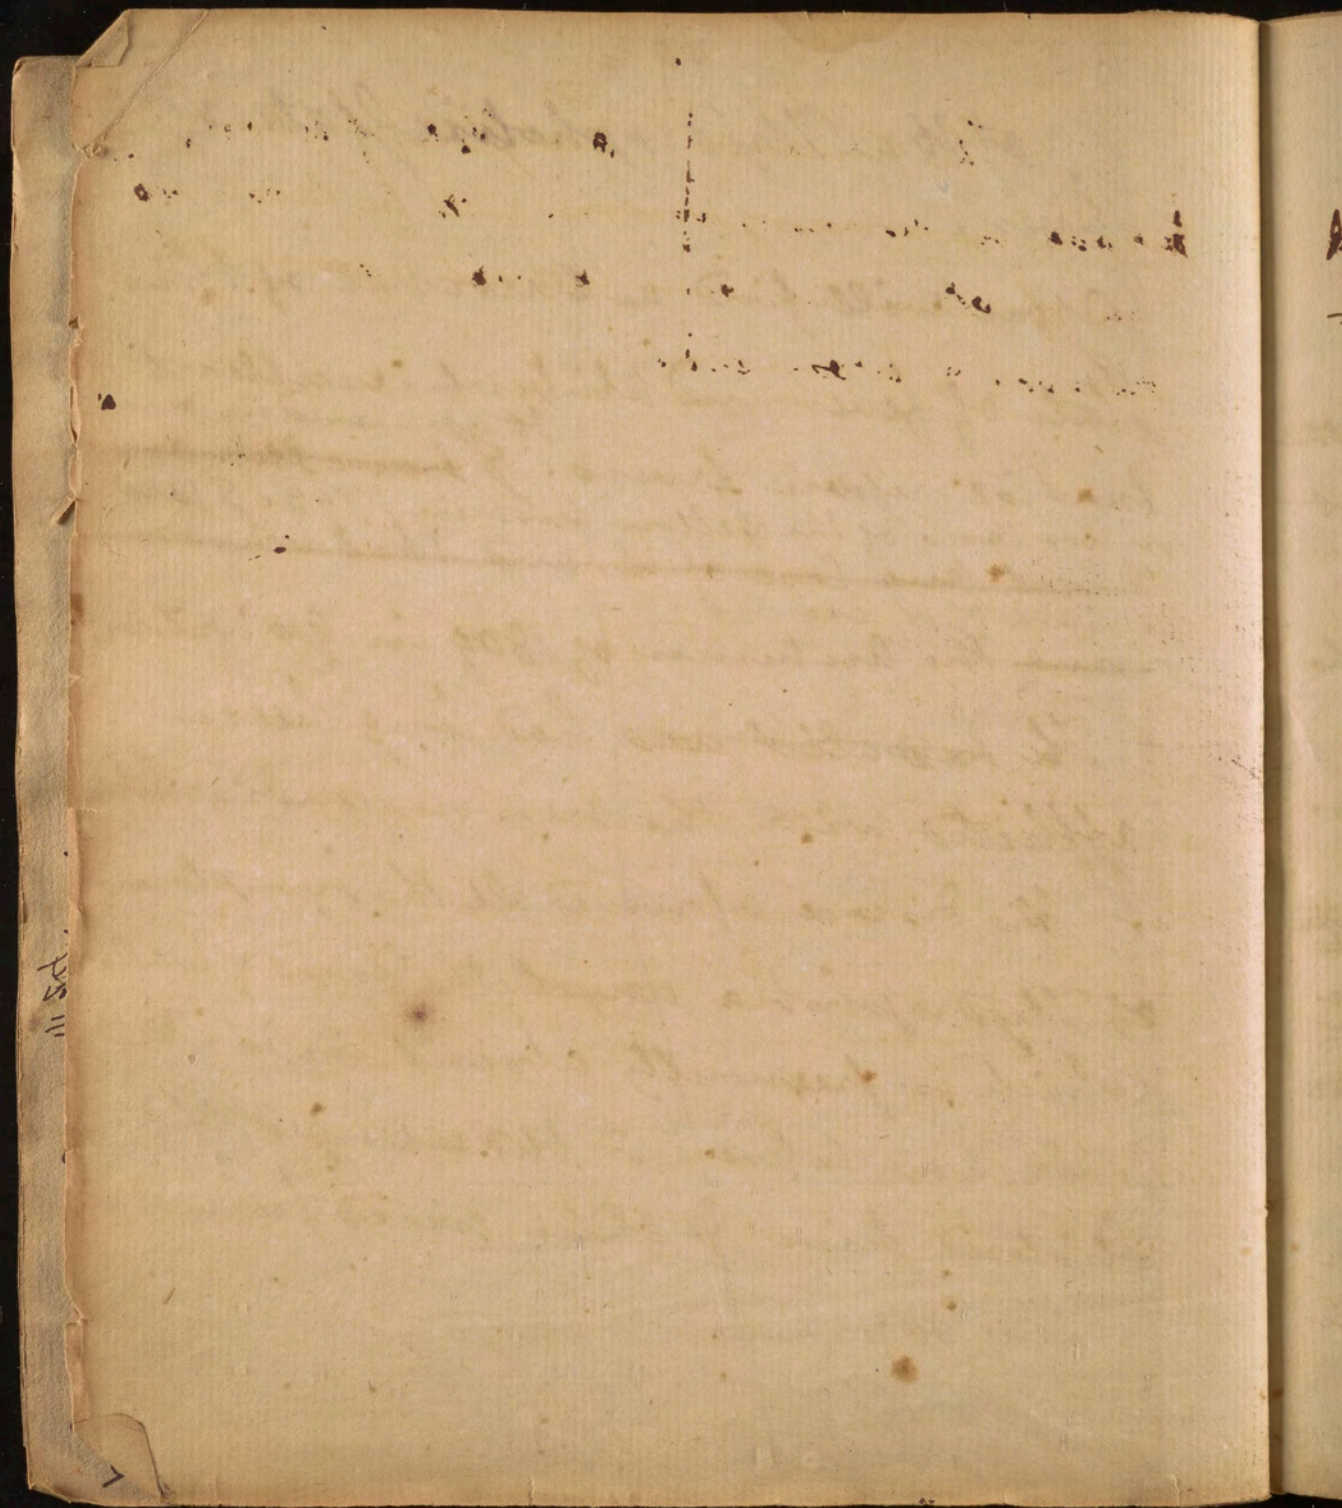

Muscles - eyes & ears externally, also the
mesenteric Glands - lungs, ^{with Uterus & soft parts,} liver, bladder,
rectum, Uterus, & Ovaria internally. It
occasionally affects the teeth & all the bones
of the body. - it is then called Rickets
It is a very common disease in Eng.

of the Hydrophobic state of
fever.

You will find an account of this
state of fever in Ali besh, excellent
treatise upon fevers. ~~It appeared in one~~
~~or two cases of the yellow fever in 1793. I saw~~
~~I met one case of it, and that was seen~~
~~a case of it in~~
~~in the Autumn of 1809 in Geo Wilson.~~

- The ~~had~~ ~~was~~ had long been
afflicted with the nervous predisposition.

- His disease assumed all the symptoms
of Hydrophobia except the dread of water,
which is frequently absent in it. His
pulse was active. I bled & purged. &
blistered him. & thus cured him in
a few days. -

The Amenorrhagic state of fever. This
 disease ~~is~~ ~~disease of women~~. will be taken no-
 -tice of when we come to treat upon the
 diseases of women.

^{two}
* Dr. Winter says it often accompanies the
bilious fevers of Jamaica. Mr. and ^W Elliot
informed me he had run it ~~off~~ ^{in a}
whole Company of Surgeons ~~in the~~ who
were affected with the autumnal fever.

I have run it several times in this city.

^{Epilepsy} ~~is~~ ^{Dr} ~~the~~ ^{the latter}
~~Even the~~ ~~hydrophobia~~ ~~at~~ ~~times~~ ~~as~~
symptoms of fever. according to Abikent. ~~the~~
attended yellow fever in 1793 & a case of ~~hydro~~
which ended in ~~hydrophobia~~: intestine under the
care of the late Dr Carson. That is ~~Gravels~~ a
higher & more permanent grade of Con-
=vulsions. - Wepfer describes an epidemic
fever in Germany in 1693 in which
convulsions were a general symptom. It
was better ~~than~~ ^{had} grain.

Convulsive state of fever

Fever from all their causes are sometimes thrown upon the muscles, and bring on general or partial convulsions. Children are most subject to them. But they occur in Adults in malarial fevers.

The Tetanus is sometimes a symptom of fever. ~~Mr Elliker, & Dr Hunter's facts.~~ These convulsions are now & then excited by the emotion of the patient. as in Capt. Taylor, & by touch - & speech, as in the girl in the yellow fever.

Remedies

1st. ~~opium~~ and all the remedies ^{or} are indicated by the fever of which these convulsions are symptoms, with the addition of such as act more immediately upon the muscular system such as Oil of Amber - Asafetida &c

The Hysterical & Hypochondriacal
States of fever.

Symptoms of both these States of the
Nervous System often combine in fevers.
In the Hypochond^{ic} - the brain is affected,
and the patient labours under a con-
-stant death phobia. In the hysterical
State of fever, there is a disposition to shed
tears - with pale Urine - Globus and
Clavis hysterica⁺. They are troublesome
cases, & require great attention & management.
The ~~best~~ Remedies for these States

of fever should be the same as for the
fever ^{with} ~~to~~ which these symptoms blend
themselves. The Palliative need may
be given for them to please our pa-
-tients.

Hysterical Symptoms when blended
with fever - go to p. opposite 25. ©

in part left him. In this situation of
his system I changed my conduct to-
wards him. Upon asking him ^{one} ~~my~~
first day how he was (having previously
found his pulse ~~exactly natural~~ ^{exactly improved}) he
answered "very bad," & added that he
was sure he should die." I said I was
sorry for it, - and then ^{at short} ~~in after a short~~
~~interval~~ ^{later} I asked him ~~what he~~ whether
I should send a joiner to him to measure
him for his coffin! This question ^{excited} ~~instantly~~
new emotions in him - he ~~dismissed his~~
~~face~~ ^{from that time} ~~he~~ ^{remained}, without =

✓ Cutaneous diseases are common travellers
till as in Egypt. They ^{are} probably a translation
of the plague to the skin.

= mentioning his dread of death to me
in any of my subsequent visits to
him.

~~Hysterical symptoms when bled~~

was built for his bad gain.

The Antinous state of fever

In this case, the fumes is suffocated in the skin.

They are distinguished from the ^{common} ~~fevers~~ by the fever on the skin being in ^{attended} a suffocated state - & hence they are easily ^{or} without, thirst, quick pulse. I have suppo-
sed the dysentery to be an ^{chronic} extravasated
fever. It arises from all the causes of
Antennal ^{or malarial} fevers. It is less declined
in Europe with those fevers. The prickly
heat is a substitute for Yellow fever in
the West Indies according to Dr Hillary. None
have it in whom this eruption continues
during a sickly season. The Tania Capitis
and many other local eruptions often
alternate with fever. The state of the

② Should not reduce us from
with fever ~~require great judgment to~~
attending chiefly to the fever. ^{The fever} It may be
known by the pulse - has an Uræmic
Epidemic. I was once called to a lady
in consultation ^{with a physician of}
in this city who for the first attack of
the ^{the} yellow fever had some trifling hysterical
symptoms. She was taking ^{nothing but} the use of
- I advised leaving ^{it} them off & ^{the use of} Valerian,
- she by the use of which (the former 13
times) she was cured of a febrile
attack of yellow fever. Her first physician
could not believe her disease was yellow
fever, because she had not been on
board of a ship, nor near any person
ill with the yellow fever.

was built on the top of 92 acres.

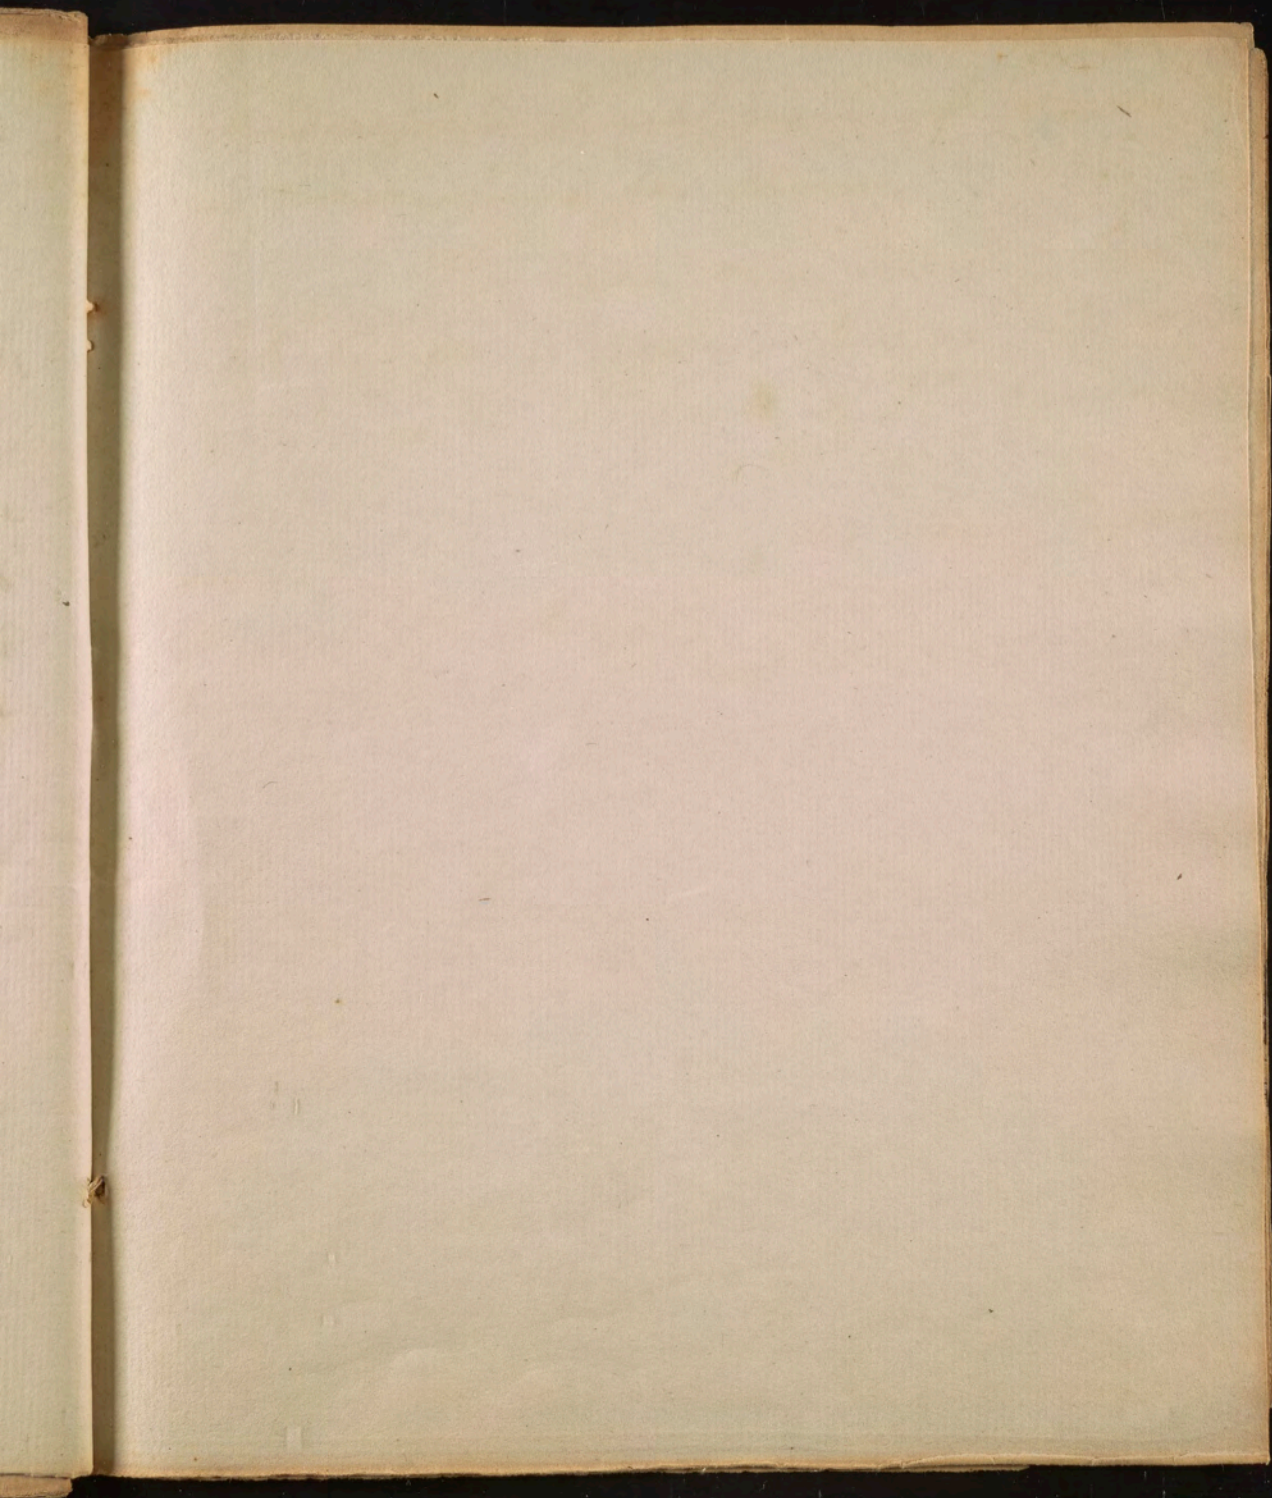

blood vessels should never be overlooked
in prescribing for them.

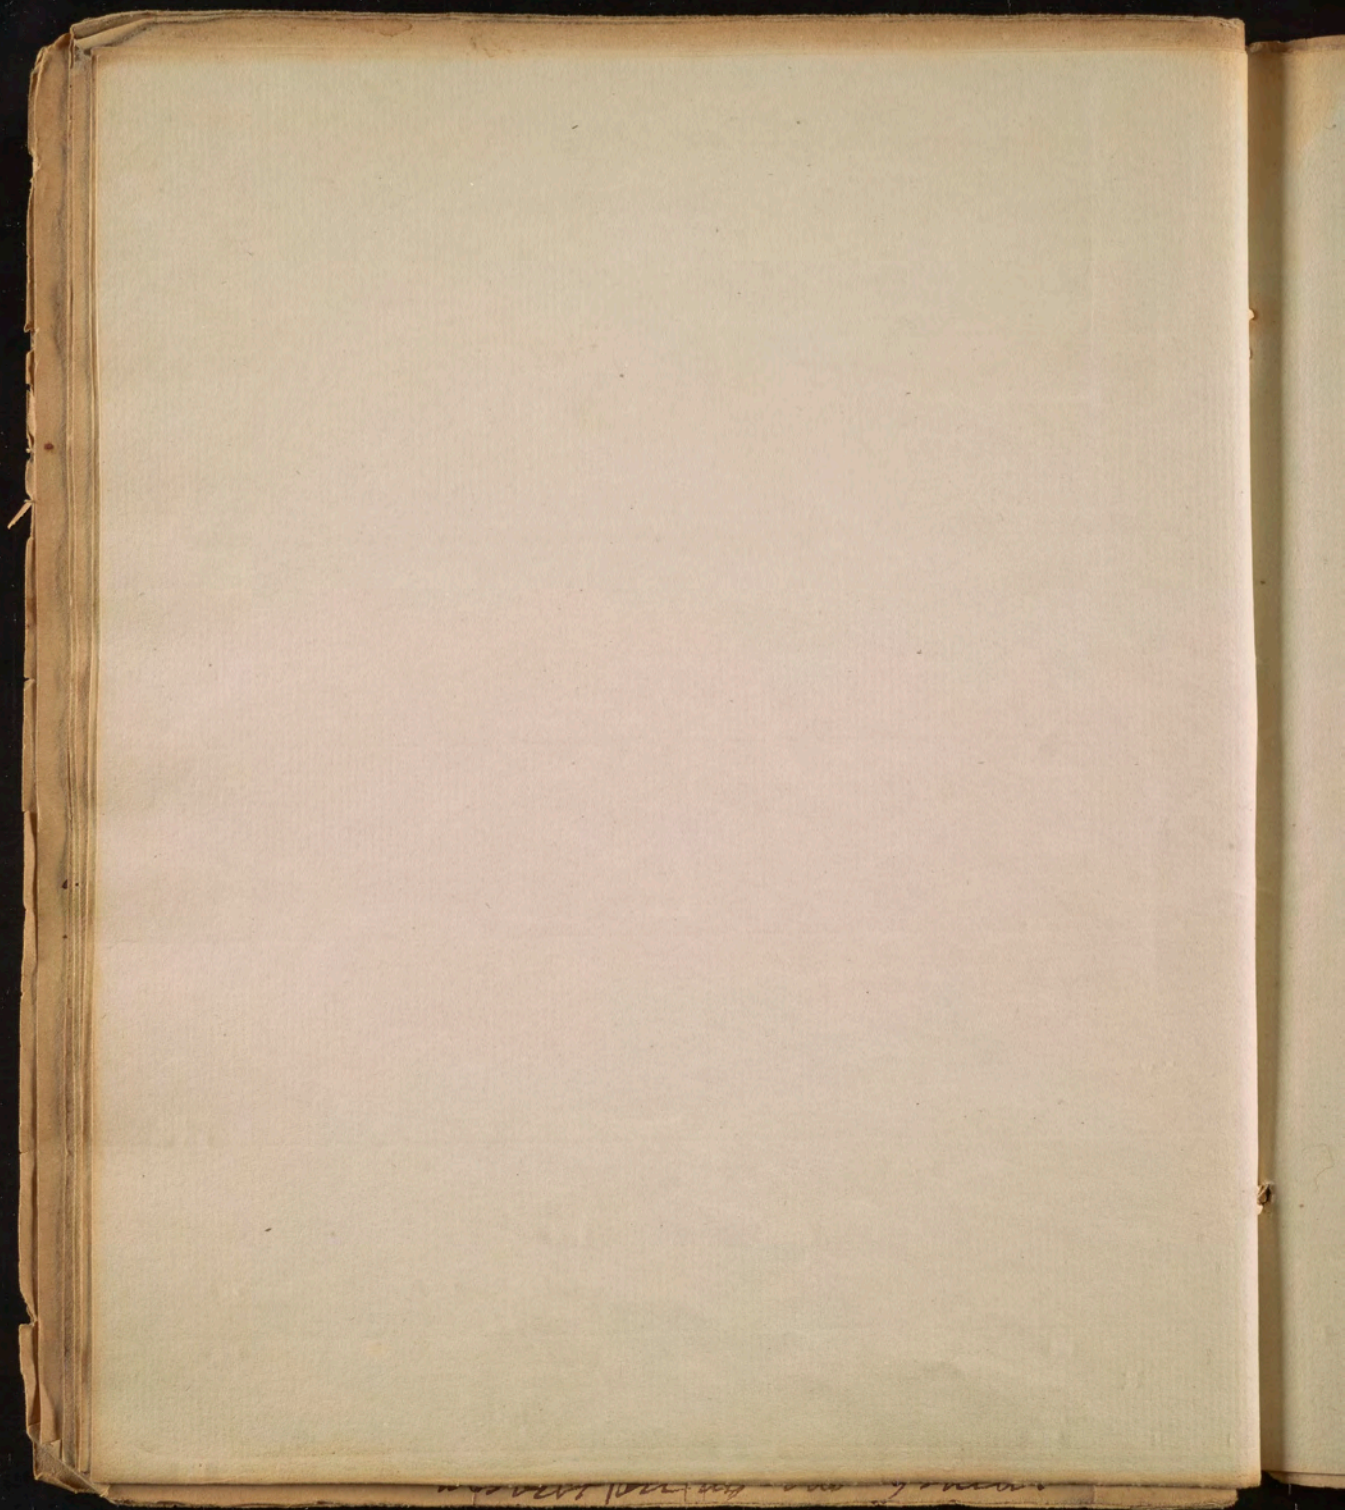

The Remedios should be

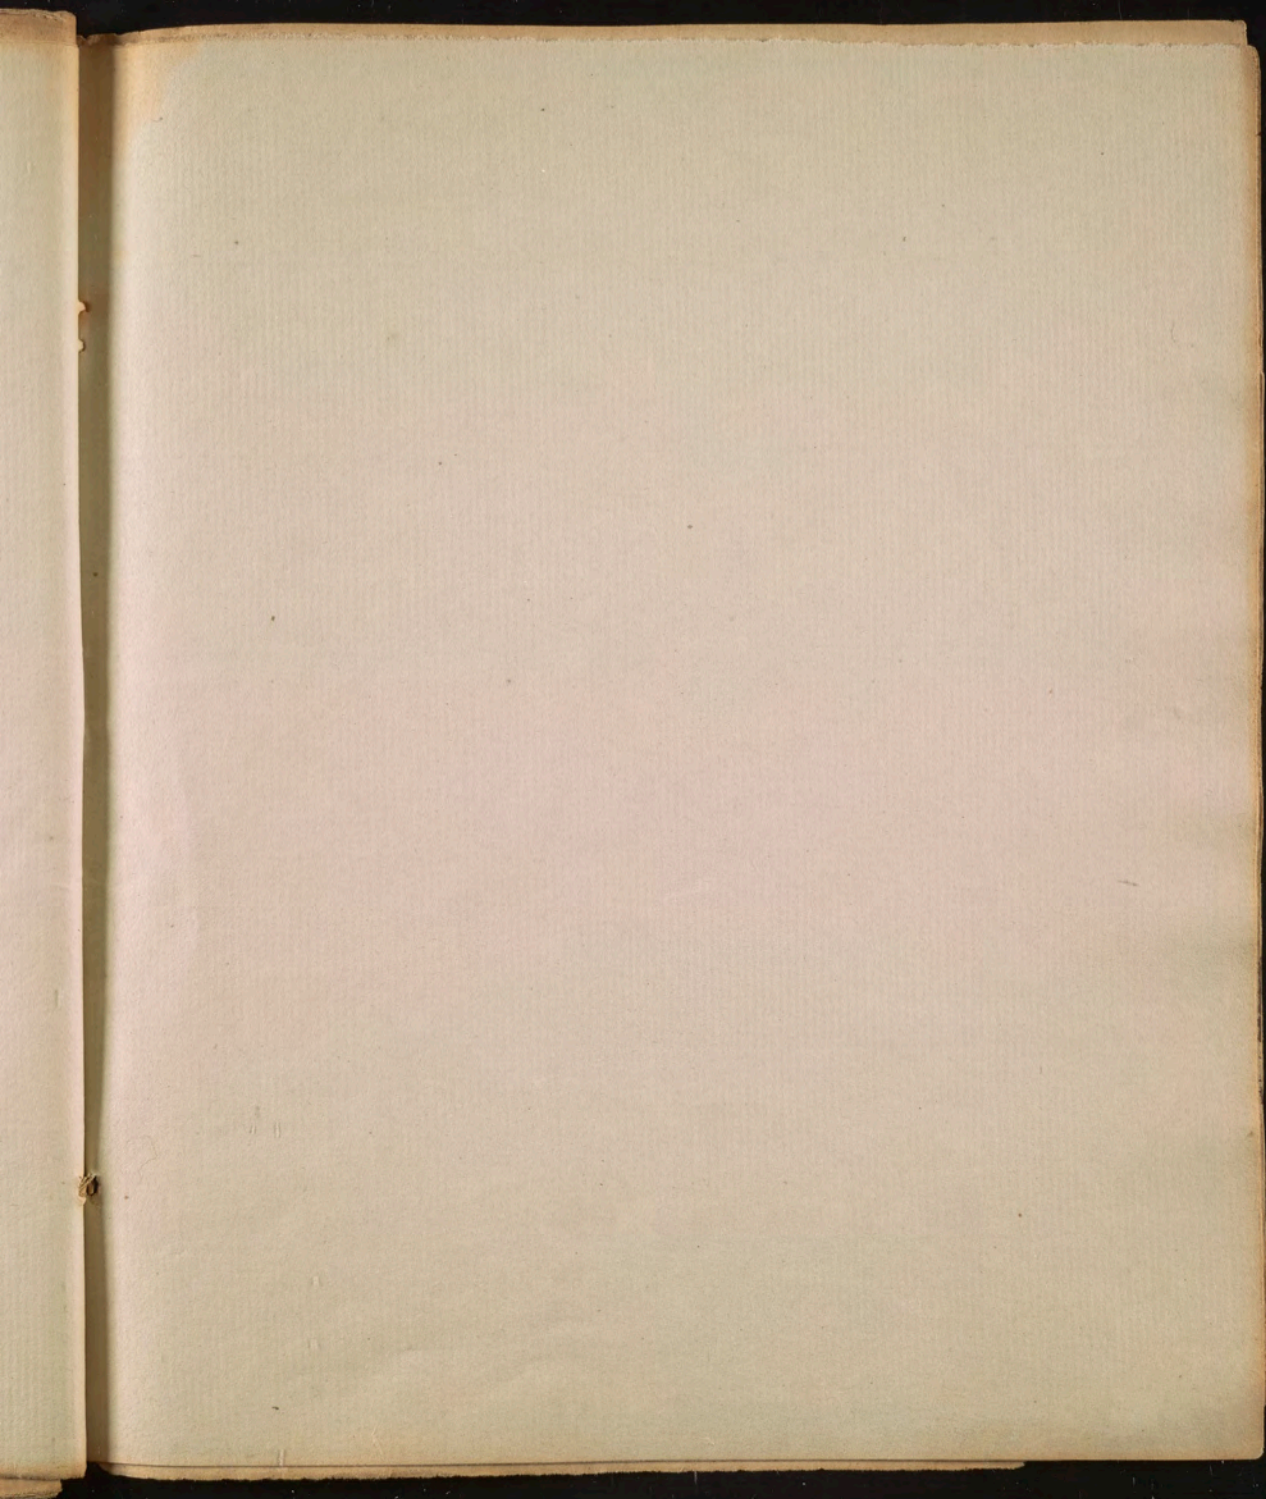

1. Res. ⁺ 2) surges - 3) meats - 4) low or full diet according to the state of the system.

+ I mentioned a fact from Dr Thury of St
 the bleeding piles preventing the lymphy ~~the~~
 Astoria. This shows the connection between
 diseases of the skin & blood letting.
